# LIN, KUO

(+86) 159 8900 3052  $\diamond$  1155152472@link.cuhk.edu.hk

#### EDUCATION

The Chinese University of Hong Kong M.Sc. in Computer Science Sun Yat-sen University B.Eng. in Computer Science

#### **RESEARCH INTERESTS**

Computational Social Science, Public Opinions, Social Networks, Natural Language Processing

#### **RESEARCH EXPERIENCE (SOCIAL SCIENCE RELATED)**

#### Analysis of corporate social accounts

Research Assistant, Supervised by Prof. XIA Ying

- · Responsible for data collection, collation, cleaning and analysis
- Analyze the vocabulary of social accounts of large enterprises and the differences in vocabulary before and after significant political events.

# Correlation Analysis: Based on News and Proposals from members of the Legislative Council of Hong Kong

Research Assistant, Supervised by Prof. XIA Ying

- $\cdot\,$  Responsible for data transformation, analysis and modeling.
- $\cdot$  Data cleaning and tokenizing. Processed the data of News and Proposals in the period of 15 years.
- Build Language model using **Word2vec** and extract the keywords of the news.
- Analyze the word frequency of keywords in the news and do correlation analysis with legislative council proposals considering the party affiliation of the member.

#### Topic modelling: Based on People's Proposal to the government

Research Assistant, Supervised by Prof. XIA Ying

- · Responsible for data cleaning and analysis. Processed People's Proposal data for the period 2009-2019.
- Use **Latent Dirichlet Allocation** to build a topic model and extract the themes of the text by year and month respectively. Make predictions about the theme of each text and statistical analysis of individual topics.

#### **RESEARCH EXPERIENCE (OTHERS)**

#### Data mining based on Covid-19 related scientific literature

Research Project of Master's course

- Use NLP algorithms such as vectorization and PCA for data preprocessing, based on the literature dataset Cord-19 provided by the US government.
- $\cdot$  Extract document features and use clustering methods such as K-means++ to cluster documents with similar topics.
- $\cdot\,$  Use T-sne algorithm for dimensionality reduction and data visualization

# Design and Implementation of K-Nearest Neighbor Algorithm Based on Homomorphic Encryption

Undergraduate Research Project

2020.9 - 2021.11 GPA 3.625/4 2016.9 - 2020.6 GPA 3.7/4

2022.1 - 2022.3

2021.11 - 2021.12

2022.7 - Present

2020.11 - 2020.12

- $\cdot$  Based on the existing K-nearest neighbor algorithm using traditional encryption methods, use the method of homomorphic encryption to optimize the existing algorithm.
- $\cdot\,$  Complete and evaluate the homomorphic encryption-based K-nearest neighbor algorithm with the help of the homomorphic encryption library HElib.

## WORK EXPERIENCE

Miaozhen Information Technology Co., Ltd. Algorithm researcher of Natural Language Processing	2022.4 – Present
MiningLamp Technology	2021.11 - 2022.4
Algorithm engineer of Natural Language Processing	
MiningLamp Technology	2021.7 - 2021.11
Intern	

# **PROJECT AND ENGINEERING EXPERIENCE (IN WORK)**

# Named Entity Recognization in different area

Developer

- Train **entity recognition** models on corpora in different fields, including automobiles, food and beverages, beauty, etc.
- $\cdot\,$  Deploy models on the Kubernetes platform and make predictions on large-scale data. The scale of data is tens of millions.

## Text Classification on extreme short texts

Project Manager

- Finetune the **TextCNN** model to deal with the extreme short texts. The length of texts is 2-6 Chinese characters and the number of label is 8.
- $\cdot\,$  Achieved an average F1-score of 0.86 with min F1-score of 0.70.

# Text Classification based on TextCNN and BERT

#### Main developer

- Extract text features using pre-trained models, and train text classification models using convolutional neural networks (**TextCNN**) and **BERT** models.
- $\cdot\,$  Mainly used for text classification and label extraction of social media data.
- $\cdot$  Achieved an F1-score of 0.87 on a social media dataset of 32 classifications and an F1-score of 0.98 on a dataset for Recognition of Marketing Advertisements.

# Post-Search Recommender System in Smart Search

#### Main developer

- Perform entity recognition on a large-scale text database, use the results of entity recognition to segment words, and train a **word embedding model**.
- $\cdot$  According to the user's query request, word segmentation and calculation of similar entities and phrases based on language model are used for recommendation. The process has been written as a patent and passed the preliminary examination

# Tokenizers for Chinese corpora in different industries

Developer

• Use **BERT** and Conditional Random Field (**CRF**) to implement Chinese word tokenizer. Can effectively complete word segmentation in beauty, e-commerce, digital, catering and other industries, and better identify industry vocabulary.

# 2022.6 - Present

#### 2022.5 - 2022.6

2022.6

2022.3 - 2022.4

2022.2 - 2022.3

## Intelligent question answering robot based on tabular data Developer

• Perform **semantic analysis** on the questions asked by users, make queries based on tabular data given by users and organize into human language answers.

# New-word discovery and Phrase Mining

 $Main\ developer$ 

- · Divide the text into segments of different lengths, and use statistical information to calculate the richness of information on both sides of the segment and the tightness of the interior of the segment, and determine whether the segment can form a new word or phrase.
- $\cdot\,$  Achieved an accuracy of 94.5 on the company's document dataset.
- It is used to optimize the recall results of text retrieval and improve the relevance. The patent has been written and passed the preliminary examination. It is also used for mining social media data to discover current new products, new trends and new topics.

## SKILLS

Language	Mandarin (Native), English(TOFEL 104, GRE 321), Cantonese (Simple usage)
Coding	Python, C/C++, R, SQL, Shell, $L^{A}T_{E}X$
Platform	Pytorch, Tensorflow, Scikit-Learn, Kubernetes, Elastic-Search, Docker

# AWARDS AND RECOGNITIONS

Dean List Scholarship 2020-21

Distinguished Academic Performance Scholarship 2020-21

Honorable Mentioned in The Mathematical Contest in Modeling (MCM/ICM) of 2019

Second Prize in 2019 Sun Yat-sen University Computer Programming Competition (top 10%)

Second Prize in 2018 Sun Yat-sen University Computer Programming Competition (top 10%)

Second Prize in 2017 Sun Yat-sen University Computer Novice Programming Competition (top 12%)

2022.1 - 2022.3

2021.11 - 2022.1
